COMPOSITE DECKING

Stainless Steel Clip

Pros

- Stainless steel clips (SSC) would provide more strong and durable fixing.
- They would give better surface image as the gap between the boards would be only around 4-5mm
- They wont break overtime and boards wont move because of it

Cons

- Stainless steel clips are more expensive
- SSCs are not allowing for a particular board to be uplifted once installed. For a board in the middle of the deck to be taken out you would need to start from the end board and make your way in

Nylon Clip

Pros

- Nylon clips are less expensive
- Due to the larger gap, nylon clips allow you to unscrew them and lift a particular board
- Available in larger 4.6m² coverage packs.
- Quicker to install - only 1 fixing screw.

Cons

- Gap between the boards is larger – around 7-8mm.
- They are made of strong nylon material however they are not as strong and durable as stainless steel clips.
